

I. Contact & Overview

Name: Almar G. Godes

Role/Focus: Aspiring Software Developer | IT Support Specialist

GitHub/Online Profile: <https://github.com/godesalmar-source>

Email: alge.godes.coc@phinmaed.com

II. Portfolio Projects

Project 1: Financial Literacy Assistant for Students System

Keywords: Python, System Development, Financial Literacy, Backend Logic

1. Project Summary & Problem Solved:

This project involved designing and developing a Python-based system to assist college students in managing their finances. The core problem was that many students lack the tools to effectively track transactions, allocate allowances, categorize expenses, and monitor overall financial activity. Our system provides a structured solution to encourage responsible money management.

2. Key Objectives & Features:

- To create a system that tracks students' allowances and expenses, organizing data for easy monitoring.
- To promote financial literacy and responsible budgeting through helpful tips and visualizations.
- To develop a user-friendly system that helps students track their finance and promote responsible money management.

3. Technical Contribution & Evidence:

Programming Language: Python

Development Tools: SQLite3

Database Management: SQLite3

Evidence:

Code Repository: <https://github.com/godesalmar-source>

Logic Focus: Designed and implemented the core calculation logic to handle budgeting algorithms and categorize spending patterns.

Data Handling: Implemented a robust data storage mechanism to ensure user data (transactions, budgets) is persistent and securely accessible.

Project 2: Class Participation & Collaboration System

Keywords: System Analysis, Requirements Gathering, Documentation, Teamwork, Collaboration

Date: PHINMA CDC | November 2025

1. Project Summary & Solution:

As part of a team, we developed a system (named "FINWISE") tailored to track student progress and participation. This addressed the need for a practical, suitable, and useful tracking tool that improved data organization and provided clear feedback to students.

2. System Analysis & Design:

Problem Identification: Identified the lack of a standardized and efficient method for tracking class participation, leading to inconsistent data and subjective assessments.

Conceptual Design: Created a system that streamlined the input of class activities and outputted measurable data points for both instructors and students.

Documentation Output: Developed detailed User Requirements Documents and System Flow Diagrams to guide the development and future maintenance of the system. (This demonstrates technical documentation skills).

3. Skills Demonstrated:

Analytical Skill: Translated complex collaborative needs into a structured, functional system design.

Documentation: Created clear and concise technical specifications for the system.

Teamwork: Successfully worked with our classmates to achieve a unified, high-quality output.

III. Practical Experience & Skills Application

DICT 10 DTC Training – Immersion

Focus: Practical IT Support, Hardware/Software Maintenance, Professional Collaboration

Duration: 2 weeks | Gen A. Luna, Cagayan de Oro City | 2 weeks

1. Technical Skills Applied:

- **PC Maintenance & Troubleshooting:** Gained hands-on experience in disassembling and reassembling PC units and diagnosing common hardware issues (e.g., failing RAM, hard drive errors).
- **Software Deployment:** Practiced configuring and installing essential office applications (Microsoft Word, Spreadsheet) and operating systems on multiple workstations.
- **Hardware Knowledge:** Learned basic troubleshooting and maintenance procedures for peripheral devices and network components.

2. Professional Collaboration:

- **Inter-School Cooperation:** Collaborated effectively with staff and students from another school to share knowledge, resources, and standardized practices for IT lab setup and maintenance.
- **Professional Communication:** Applied standard etiquette and procedures in a professional work environment.
